## New Label for Lead-Free Products from A P Products

In order to distinguish lead-free products from tin/lead plated products A P Products has introduced a new label.

All products that have been manufactured by A P Products that have lead-free solder plating will have this new label on the individual packaging of the product.

This new label will be used until the use of lead is banned in June 2006 and therefore it is no longer needed to distinguish between lead-free and tin/lead parts.

As more and more of our products become available in lead-free plating this label will be more common in day to day handling. Please inform your departments handling our products accordingly.

If you have further questions please do not hesitate to contact us.
